RECEIVED

JUN 04 1986

USEPA, RCRA Branch

On Thursday, May 22, 1986, David N. Whiting, Environmental Engineer for the USEPA, conducted a RCRA compliance inspection of our facility. During the inspection three violations were identified. The violations are:

1. No unique 5 digit manifest number used on the manifest.
2. No list of names of people in jobs involved in hazardous waste management.
3. Paint filters not determined to be hazardous or not.

Our corrections for these violations are:

1. Dick Kelly, our traffic manager, has been instructed to use a unique 5 digit number on the manifest and in his manifest log. Dick will make the change by adding 01 to the front of the 3 digit numbers he has been using.
2. I will compile a list of names of the people involved with hazardous waste management and include that list in the Personnel Training Plan. It will be the responsibility of the plant environmental coordinator to update this list as change takes place.
3. A used filter from the spray booth operation will be sent to SERCO Labs for a hazard determination. SERCO will run a EP toxicity test and a flammability test on the dirty filter. When results are available I will send you a copy.
